## A Hybrid High-Order method for Kirchhoff-Love plate bending problems

## Francesco Bonaldi

joint work with D. A. Di Pietro, G. Geymonat, and F. Krasucki

MOX NuMeth Seminar
November 16, 2017

## Outline

(1) Motivations
(2) Key ideas for HHO
(3) Discrete setting

- Mesh
- Projectors on local polynomial spaces

4 The HHO method

- Local unknowns and interpolation
- Local deflection reconstruction
- Global problem
- Error estimates
- Numerical examples
- Discrete PVW \& Laws of action-reaction
(5) Conclusions \& perspectives

## Motivations

- Let $\Omega \subset \mathbb{R}^{2}$ be an open, bounded, connected polygonal 2D domain

## $\mathrm{K}-\mathrm{L}$ clamped plate bending problem

For $f \in L^{2}(\Omega)$, find $u \in H_{0}^{2}(\Omega)$ such that

$$
\left(\mathbb{A} \nabla^{2} u, \nabla^{2} v\right)=(\mathrm{f}, v), \quad \forall v \in \mathrm{H}_{0}^{2}(\Omega)
$$

## Motivations

- Let $\Omega \subset \mathbb{R}^{2}$ be an open, bounded, connected polygonal 2D domain

## K-L clamped plate bending problem

For $f \in L^{2}(\Omega)$, find $u \in H_{0}^{2}(\Omega)$ such that

$$
\left(\mathbb{A} \nabla^{2} u, \nabla^{2} v\right)=(\mathrm{f}, v), \quad \forall v \in \mathrm{H}_{0}^{2}(\Omega)
$$

- A conforming discretization is computationally expensive ( $\mathrm{C}^{1}$ elements)

■ HCT energy-error estimate [Ciarlet, 1974]: provided $u \in H^{4}(\Omega)$,

$$
\left\|u-u_{h}\right\|_{H^{2}(\Omega)} \leqslant \mathrm{Ch}^{2}|u|_{\mathrm{H}^{4}(\Omega)}
$$

## Motivations

- Let $\Omega \subset \mathbb{R}^{2}$ be an open, bounded, connected polygonal 2D domain

## K-L clamped plate bending problem

For $f \in L^{2}(\Omega)$, find $u \in H_{0}^{2}(\Omega)$ such that

$$
\left(\mathbb{A} \nabla^{2} u, \nabla^{2} v\right)=(\mathrm{f}, v), \quad \forall v \in \mathrm{H}_{0}^{2}(\Omega)
$$

- A conforming discretization is computationally expensive ( $\mathrm{C}^{1}$ elements)
- HCT energy-error estimate [Ciarlet, 1974]: provided $u \in H^{4}(\Omega)$,

$$
\begin{gathered}
\left\|u-u_{h}\right\|_{H^{2}(\Omega)} \leqslant C h^{2}|u|_{H^{4}(\Omega)} \\
\Downarrow
\end{gathered}
$$

■ Goal: devising a new nonconforming numerical scheme, so as to improve the computational cost of the method

## (2) Key ideas for HHO

3) Discrete setting

- Mesh
- Projectors on local polynomial spaces

4 The HHO method

- Local unknowns and interpolation
- Local deflection reconstruction
- Global problem
- Error estimates
- Numerical examples
- Discrete PVW \& Laws of action-reaction

5 Conclusions \& perspectives

## Key ideas for HHO

■ Discrete unknowns

- Polynomials of order $k \geqslant 1$ on mesh cells and faces
- Cell-based unknowns can be eliminated by static condensation
- Building principles
- Reconstruction operator based on local primal Neumann problems
- Face-based penalty linking cell- and face-based unknowns

■ Main benefits

- Capability of handling general polygonal meshes
- High-order method: energy-error estimate of order $(k+1)$ and $L^{2}$-error estimate of order $(k+3)$ for smooth solutions
- Reproduction of key continuous mechanical properties at the discrete level

2. Key ideas for HHO
(3) Discrete setting

- Mesh
- Projectors on local polynomial spaces

4 The HHO method

- Local unknowns and interpolation
- Local deflection reconstruction
- Global problem
- Error estimates
- Numerical examples
- Discrete PVW \& Laws of action-reaction

5 Conclusions \& perspectives

## Mesh

## Mesh regularity

We consider a sequence $\left(\mathcal{T}_{h}\right)_{h \in \mathcal{H}}$ s.t., for all $h \in \mathcal{H}, \mathcal{T}_{h}$ admits a simplicial submesh $\mathfrak{T}_{h}$, and $\left(\mathfrak{T}_{h}\right)_{h \in \mathcal{H}}$ is

- shape-regular in the usual sense of Ciarlet
- contact-regular, i.e., every simplex $S \subset T$ is s.t. $h_{S} \approx h_{T}$

## Mesh

## Mesh regularity

We consider a sequence $\left(\mathcal{T}_{h}\right)_{h \in \mathcal{H}}$ s.t., for all $h \in \mathcal{H}, \mathcal{T}_{h}$ admits a simplicial submesh $\mathfrak{T}_{h}$, and $\left(\mathfrak{T}_{h}\right)_{h \in \mathcal{H}}$ is

- shape-regular in the usual sense of Ciarlet
- contact-regular, i.e., every simplex $S \subset T$ is s.t. $h_{S} \approx h_{T}$

Consequences [Di Pietro \& Ern, 2012;
Di Pietro \& Droniou, 2017]:

- $\mathrm{L}^{2}$-trace and inverse inequalities
- Approximation for broken polynomial spaces

Hypothesis: the material tensor field $\mathbb{A}$ is element-wise constant; we set

$$
\mathbb{A}_{\mathrm{T}}:=\mathbb{A}_{\mid \mathrm{T}} \quad \forall \mathrm{~T} \in \mathcal{T}_{\mathrm{h}}
$$

## Projectors on local polynomial spaces

■ The $L^{2}$-orthogonal projector $\pi_{\mathrm{x}}^{\ell}: \mathrm{L}^{2}(\mathrm{X}) \rightarrow \mathbb{P}^{\mathfrak{l}}(\mathrm{X})$ is s.t.

$$
\left(\pi_{x}^{\ell} v-v, w\right)_{x}=0 \quad \forall w \in \mathbb{P}^{\ell}(X)
$$

## Projectors on local polynomial spaces

■ The $L^{2}$-orthogonal projector $\pi_{\mathrm{X}}^{\ell}: \mathrm{L}^{2}(\mathrm{X}) \rightarrow \mathbb{P}^{\ell}(\mathrm{X})$ is s.t.

$$
\left(\pi_{x}^{\ell} v-v, w\right)_{X}=0 \quad \forall w \in \mathbb{P}^{\ell}(X)
$$

■ The local energy projector $\varpi_{T}^{\ell}: \mathrm{H}^{2}(\mathrm{~T}) \rightarrow \mathbb{P}^{\ell}(\mathrm{T})$, for $\ell \geqslant 2$, is s.t.

$$
\begin{aligned}
\left(\mathbb{A}_{\mathrm{T}} \nabla^{2}\left(\boldsymbol{\omega}_{\mathrm{T}}^{\ell} v-v\right), \nabla^{2} w\right)_{\mathrm{T}} & =0 \quad \forall w \in \mathbb{P}^{\ell}(\mathrm{T}), \\
\pi_{\mathrm{T}}^{1}\left(\boldsymbol{\omega}_{\mathrm{T}}^{\ell} v-v\right) & =0
\end{aligned}
$$

## Projectors on local polynomial spaces

- The $\mathrm{L}^{2}$-orthogonal projector $\pi_{\mathrm{X}}^{\ell}: \mathrm{L}^{2}(\mathrm{X}) \rightarrow \mathbb{P}^{\ell}(\mathrm{X})$ is s.t.

$$
\left(\pi_{x}^{\ell} v-v, w\right)_{X}=0 \quad \forall w \in \mathbb{P}^{\ell}(X)
$$

$\square$ The local energy projector $\varpi_{T}^{\ell}: H^{2}(T) \rightarrow \mathbb{P}^{\ell}(T)$, for $\ell \geqslant 2$, is s.t.

$$
\begin{aligned}
\left(\mathbb{A}_{\mathrm{T}} \nabla^{2}\left(\propto_{\mathrm{T}}^{\ell} v-v\right), \nabla^{2} w\right)_{\mathrm{T}} & =0 \quad \forall w \in \mathbb{P}^{\ell}(\mathrm{T}), \\
\pi_{\mathrm{T}}^{1}\left(\propto_{\mathrm{T}}^{\ell} v-v\right) & =0
\end{aligned}
$$

- Both projectors have optimal approximation properties in $\mathrm{H}^{s}(\mathrm{~T})$

## Theorem (Optimal approximation properties of $\varpi_{\mathrm{T}}^{\ell}$ )

There is $C>0$ independent of $h$, but possibly depending on $\mathbb{A}$, s.t., for all $\mathrm{T} \in \mathcal{T}_{h}$, all $s \in\{2, \ldots, \ell+1\}$, and all $v \in \mathrm{H}^{s}(\mathrm{~T})$,

$$
\begin{array}{ll}
\left|v-\varpi_{\mathrm{T}}^{\ell} v\right|_{\mathrm{H}^{\mathrm{m}}(\mathrm{~T})} \leqslant \mathrm{Ch}_{\mathrm{T}}^{\mathrm{s}-\mathrm{m}}|v|_{\mathrm{H}^{\mathrm{s}}(\mathrm{~T})} & \forall \mathrm{m} \in\{0, \ldots, \mathrm{~s}-1\}, \\
\left|v-\varpi_{\mathrm{T}}^{\ell} v\right|_{\mathrm{H}^{\mathrm{m}}(\partial \mathrm{~T})} \leqslant \mathrm{Ch}_{\mathrm{T}}^{\mathrm{s}-\mathrm{m}-1 / 2}|v|_{\mathrm{H}^{\mathrm{s}}(\mathrm{~T})} & \forall \mathrm{m} \in\{0, \ldots, \mathrm{~s}-1\} .
\end{array}
$$

2. Key ideas for HHO
(3) Discrete setting

- Mesh
- Projectors on local polynomial spaces

4 The HHO method

- Local unknowns and interpolation
- Local deflection reconstruction
- Global problem
- Error estimates
- Numerical examples
- Discrete PVW \& Laws of action-reaction

## 5 Conclusions \& perspectives

## Local unknowns and interpolation

Figure: $\underline{U}_{T}^{k}$ for $k \in\{1,2\}$
For $k \geqslant 1$, and $T \in \mathcal{T}_{h}$, we define the local space of discrete unknowns

$$
\underline{U}_{T}^{k}:=\mathbb{P}^{k}(T) \times\left(\underset{F \in \mathcal{F}_{T}}{\times} \mathbb{P}^{k}(F)^{2}\right) \times\left(\underset{F \in \mathcal{F}_{T}}{\times} \mathbb{P}^{k}(F)\right)
$$

## Local unknowns and interpolation

Figure: $\underline{U}_{T}^{k}$ for $k \in\{1,2\}$
For $k \geqslant 1$, and $T \in \mathcal{T}_{h}$, we define the local space of discrete unknowns

$$
\underline{U}_{\mathrm{T}}^{\mathrm{k}}:=\mathbb{P}^{\mathrm{k}}(\mathrm{~T}) \times\left(\underset{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}{X} \mathbb{P}^{\mathrm{k}}(\mathrm{~F})^{2}\right) \times\left(\underset{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}{X} \mathbb{P}^{\mathrm{k}}(\mathrm{~F})\right)
$$

- The local interpolator $\underline{\mathrm{I}}_{\mathrm{T}}^{\mathrm{k}}: \mathrm{H}^{2}(\mathrm{~T}) \rightarrow \underline{\mathrm{U}}_{\mathrm{T}}^{\mathrm{k}}$ is s.t.

$$
\underline{\mathrm{I}}_{\mathrm{T}}^{\mathrm{k}} v:=\left(\pi_{\mathrm{T}}^{\mathrm{k}} v,\left(\pi_{\mathrm{F}}^{\mathrm{k}}\left((\boldsymbol{\nabla} v)_{\mid \mathrm{F}}\right)\right)_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}},\left(\pi_{\mathrm{F}}^{\mathrm{k}}\left(v_{\mid \mathrm{F}}\right)\right)_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}\right)
$$

## Local deflection reconstruction I

- We define the local deflection reconstruction $p_{T}^{k+2}: \underline{\mathrm{U}}_{\mathrm{T}}^{\mathrm{k}} \rightarrow \mathbb{P}^{\mathrm{k}+2}(\mathrm{~T})$ s.t.

$$
\begin{aligned}
&\left(\mathbb{A}_{\mathrm{T}} \nabla^{2} p_{\mathrm{T}}^{\mathrm{k}+2} \underline{v}_{\mathrm{T}}, \nabla^{2} w\right)_{\mathrm{T}}=\left(\mathbb{A}_{\mathrm{T}} \nabla^{2} v_{\mathrm{T}}, \nabla^{2} w\right)_{\mathrm{T}} \\
&+\sum_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}\left(v_{\nabla, \mathrm{F}}-\nabla v_{\mathrm{T}},\left(\mathbb{A}_{\mathrm{T}} \nabla^{2} w\right) \mathfrak{n}_{\mathrm{TF}}\right)_{\mathrm{F}} \\
&-\sum_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}\left(v_{\mathrm{F}}-v_{\mathrm{T}}, \operatorname{div} \mathbb{A}_{\mathrm{T}} \nabla^{2} w \cdot \mathbf{n}_{\mathrm{TF}}\right)_{\mathrm{F}} \\
& \text { for all } w \in \mathbb{P}^{\mathrm{k}+2}(\mathrm{~T})
\end{aligned}
$$

## Local deflection reconstruction I

- We define the local deflection reconstruction $p_{T}^{k+2}: \underline{\mathrm{U}}_{\mathrm{T}}^{\mathrm{k}} \rightarrow \mathbb{P}^{\mathrm{k}+2}(\mathrm{~T})$ s.t.

$$
\begin{aligned}
\left(\mathbb{A}_{\mathrm{T}} \nabla^{2} p_{\mathrm{T}}^{\mathrm{k}+2} \underline{v}_{\mathrm{T}}, \nabla^{2} w\right)_{\mathrm{T}}= & \left(\mathbb{A}_{\mathrm{T}} \nabla^{2} v_{\mathrm{T}}, \nabla^{2} w\right)_{\mathrm{T}} \\
& +\sum_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}\left(v_{\nabla, \mathrm{F}}-\nabla v_{\mathrm{T}},\left(\mathbb{A}_{\mathrm{T}} \nabla^{2} w\right) \mathfrak{n}_{\mathrm{TF}}\right)_{\mathrm{F}} \\
& -\sum_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}\left(v_{\mathrm{F}}-v_{\mathrm{T}}, \operatorname{div} \mathbb{A}_{\mathrm{T}} \nabla^{2} w \cdot \mathbf{n}_{\mathrm{TF}}\right)_{\mathrm{F}}
\end{aligned}
$$

for all $w \in \mathbb{P}^{k+2}(\mathrm{~T})$, with closure condition

$$
\pi_{\mathrm{T}}^{1}\left(\mathrm{p}_{\mathrm{T}}^{\mathrm{k}+2} \underline{v}_{\mathrm{T}}-v_{\mathrm{T}}\right)=0
$$

## Local deflection reconstruction I

■ We define the local deflection reconstruction $p_{T}^{k+2}: \underline{\mathrm{U}}_{\mathrm{T}}^{\mathrm{k}} \rightarrow \mathbb{P}^{\mathrm{k}+2}(\mathrm{~T})$ s.t.

$$
\begin{aligned}
\left(\mathbb{A}_{T} \nabla^{2} p_{T}^{k+2} \underline{v}_{T}, \nabla^{2} w\right)_{T}= & \left(\mathbb{A}_{T} \nabla^{2} v_{T}, \nabla^{2} w\right)_{T} \\
& +\sum_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}\left(v_{\nabla, \mathrm{F}}-\nabla v_{\mathrm{T}},\left(\mathbb{A}_{\mathrm{T}} \nabla^{2} w\right) \mathfrak{n}_{\mathrm{TF}}\right)_{\mathrm{F}} \\
& -\sum_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}\left(v_{\mathrm{F}}-v_{\mathrm{T}}, \operatorname{div} \mathbb{A}_{\mathrm{T}} \nabla^{2} w \cdot \mathbf{n}_{\mathrm{TF}}\right)_{\mathrm{F}}
\end{aligned}
$$

for all $w \in \mathbb{P}^{k+2}(\mathrm{~T})$, with closure condition

$$
\pi_{\mathrm{T}}^{1}\left(\mathrm{p}_{\mathrm{T}}^{\mathrm{k}+2} \underline{v}_{\mathrm{T}}-v_{\mathrm{T}}\right)=0
$$

- An integration by parts on the first term on the right-hand side yields

$$
\begin{aligned}
\left(\mathbb{A}_{\mathrm{T}} \nabla^{2} p_{\mathrm{T}}^{\mathrm{k}+2} \underline{v}_{\mathrm{T}}, \nabla^{2} w\right)_{\mathrm{T}}= & \left(v_{\mathrm{T}}, \operatorname{div} \operatorname{div} \mathbb{A}_{\mathrm{T}} \nabla^{2} w\right)_{\mathrm{T}} \\
& +\sum_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}\left(v_{\nabla, \mathrm{F}},\left(\mathbb{A}_{\mathrm{T}} \nabla^{2} w\right) \mathfrak{n}_{\mathrm{TF}}\right)_{\mathrm{F}} \\
& -\sum_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}\left(v_{\mathrm{F}}, \operatorname{div} \mathbb{A}_{\mathrm{T}} \nabla^{2} w \cdot \mathbf{n}_{\mathrm{TF}}\right)_{\mathrm{F}}
\end{aligned}
$$

## Local deflection reconstruction II

- By the definition of $\underline{I}_{T}^{k}$ it holds, for all $v \in \mathrm{H}^{2}(\mathrm{~T})$ and all $w \in \mathbb{P}^{k+2}(T)$,

$$
\begin{aligned}
\left(\mathbb{A}_{\mathrm{T}} \nabla^{2} p_{\mathrm{T}}^{\mathrm{k}+2} \underline{I}_{\mathrm{T}}^{\mathrm{k}} v, \nabla^{2} w\right)_{\mathrm{T}}= & \left(\pi_{\mathrm{T}}^{\mathrm{k}} v, \operatorname{div} \operatorname{div} \mathbb{A}_{\mathrm{T}} \nabla^{2} w\right)_{\mathrm{T}} \\
& +\sum_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}\left(\pi_{\mathrm{F}}^{\mathrm{k}}(\nabla v),\left(\mathbb{A}_{\mathrm{T}} \nabla^{2} w\right) \mathbf{n}_{\mathrm{TF}}\right)_{\mathrm{F}} \\
& -\sum_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}\left(\pi_{\mathrm{F}}^{\mathrm{k}} v, \operatorname{div} \mathbb{A}_{\mathrm{T}} \nabla^{2} w \cdot \mathbf{n}_{\mathrm{TF}}\right)_{\mathrm{F}}
\end{aligned}
$$

## Local deflection reconstruction II

■ By the definition of $\underline{I}_{T}^{k}$ it holds, for all $v \in \mathrm{H}^{2}(\mathrm{~T})$ and all $w \in \mathbb{P}^{k+2}(\mathrm{~T})$,

$$
\begin{aligned}
\left(\mathbb{A}_{\mathrm{T}} \nabla^{2} p_{\mathrm{T}}^{\mathrm{k}+2} \underline{I}_{\mathrm{T}}^{\mathrm{k}} v, \nabla^{2} w\right)_{\mathrm{T}}= & \left(\pi_{\mathrm{T}}^{k} v, \operatorname{div} \operatorname{div} \mathbb{A}_{\mathrm{T}} \nabla^{2} w\right)_{\mathrm{T}} \\
& +\sum_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}\left(\pi_{\mathrm{F}}^{\mathrm{k}}(\nabla v),\left(\mathbb{A}_{\mathrm{T}} \nabla^{2} w\right) \mathbf{n}_{\mathrm{TF}}\right)_{\mathrm{F}} \\
& -\sum_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}\left(\pi_{\mathrm{F}}^{\mathrm{k}} v, \operatorname{div} \mathbb{A}_{\mathrm{T}} \nabla^{2} w \cdot \mathbf{n}_{\mathrm{TF}}\right)_{\mathrm{F}}
\end{aligned}
$$

## Local deflection reconstruction II

■ By the definition of $\underline{I}_{T}^{k}$ it holds, for all $v \in H^{2}(T)$ and all $w \in \mathbb{P}^{k+2}(T)$,

$$
\begin{aligned}
\left(\mathbb{A}_{\mathrm{T}} \nabla^{2} p_{\mathrm{T}}^{k+2} \underline{I}_{\mathrm{T}}^{\mathrm{k}} v, \nabla^{2} w\right)_{\mathrm{T}}= & \left(\pi_{\mathrm{T}}^{\ell} v, \operatorname{div} \operatorname{div} \mathbb{A}_{\mathrm{T}} \nabla^{2} w\right)_{\mathrm{T}} \\
& +\sum_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}\left(\pi_{\mathrm{F}}^{k}(\nabla v),\left(\mathbb{A}_{\mathrm{T}} \nabla^{2} w\right) \mathbf{n}_{\mathrm{TF}}\right)_{\mathrm{F}} \\
& -\sum_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}\left(\pi_{\mathrm{F}}^{\mathrm{k}} v, \operatorname{div} \mathbb{A}_{\mathrm{T}} \nabla^{2} w \cdot \mathbf{n}_{\mathrm{TF}}\right)_{\mathrm{F}}
\end{aligned}
$$

## Local deflection reconstruction II

■ By the definition of $\underline{I}_{T}^{k}$ it holds, for all $v \in H^{2}(T)$ and all $w \in \mathbb{P}^{k+2}(T)$,

$$
\begin{aligned}
\left(\mathbb{A}_{\mathrm{T}} \nabla^{2} p_{\mathrm{T}}^{k+2} \underline{I}_{\mathrm{T}}^{k} v, \nabla^{2} w\right)_{\mathrm{T}}= & \left(\pi_{\mathrm{T}}^{\ell} v, \operatorname{div} \operatorname{div} \mathbb{A}_{\mathrm{T}} \nabla^{2} w\right)_{\mathrm{T}} \\
& +\sum_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}\left(\pi_{\mathrm{F}}^{k}(\nabla v),\left(\mathbb{A}_{\mathrm{T}} \nabla^{2} w\right) \mathbf{n}_{\mathrm{TF}}\right)_{\mathrm{F}} \\
& -\sum_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}\left(\pi_{\mathrm{F}}^{\chi} v, \operatorname{div} \mathbb{A}_{\mathrm{T}} \nabla^{2} w \cdot \mathbf{n}_{\mathrm{TF}}\right)_{\mathrm{F}}
\end{aligned}
$$

## Local deflection reconstruction II

- By the definition of $\underline{I}_{T}^{k}$ it holds, for all $v \in \mathrm{H}^{2}(\mathrm{~T})$ and all $w \in \mathbb{P}^{k+2}(\mathrm{~T})$,

$$
\begin{aligned}
& \left(\mathbb{A}_{T} \nabla^{2} p_{T}^{k+2}{ }_{-}^{k} v, \nabla^{2} w\right)_{T}=\left(X_{T}^{k} v, \operatorname{div} \operatorname{div} \mathbb{A}_{T} \nabla^{2} w\right)_{T} \\
& +\sum_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}\left(\mathbb{Z}_{\mathrm{F}}^{k}(\nabla v),\left(\mathbb{A}_{\mathrm{T}} \nabla^{2} w\right) \mathbf{n}_{\mathrm{TF}}\right)_{\mathrm{F}} \\
& -\sum_{F \in \mathcal{F}_{T}}\left(\mathbb{Z}_{F}^{K} v, \operatorname{div} \mathbb{A}_{T} \nabla^{2} w \cdot \mathbf{n}_{T F}\right)_{F} \\
& =\left(\mathbb{A}_{T} \nabla^{2} v, \nabla^{2} w\right)_{T}
\end{aligned}
$$

## Local deflection reconstruction II

■ By the definition of $\underline{I}_{T}^{k}$ it holds, for all $v \in \mathrm{H}^{2}(\mathrm{~T})$ and all $w \in \mathbb{P}^{k+2}(\mathrm{~T})$,

$$
\begin{aligned}
& \left(\mathbb{A}_{T} \nabla^{2} p_{T}^{k+2}{ }_{-}^{k} \nu, \nabla^{2} w\right)_{T}=\left(\pi_{T}^{k} v, \operatorname{div} \operatorname{div} \mathbb{A}_{T} \nabla^{2} w\right)_{T} \\
& +\sum_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}\left(\mathbb{Z}_{\mathrm{F}}^{K}(\nabla v),\left(\mathbb{A}_{\mathrm{T}} \nabla^{2} w\right) \mathbf{n}_{\mathrm{TF}}\right)_{\mathrm{F}} \\
& -\sum_{F \in \mathcal{F}_{T}}\left(\mathscr{Z}_{\mathrm{F}}^{K} v, \operatorname{div} \mathbb{A}_{\mathrm{T}} \nabla^{2} w \cdot \mathbf{n}_{\mathrm{TF}}\right)_{\mathrm{F}} \\
& =\left(\mathbb{A}_{\mathrm{T}} \boldsymbol{\nabla}^{2} v, \nabla^{2} w\right)_{\mathrm{T}}
\end{aligned}
$$

- As a result, for $v \in \mathrm{H}^{2}(\mathrm{~T})$,

$$
\begin{aligned}
\left(\mathbb{A}_{\mathrm{T}} \nabla^{2}\left(\mathrm{p}_{\mathrm{T}}^{\mathrm{k}+2} \underline{\underline{I}}_{-}^{k} v-v\right), \nabla^{2} w\right)_{\mathrm{T}} & =0 \quad \forall w \in \mathbb{P}^{k+2}(\mathrm{~T}), \\
\pi_{\mathrm{T}}^{1}\left(\mathrm{p}_{\mathrm{T}}^{\mathrm{k}+2} \underline{\underline{I}}_{\mathrm{T}}^{\mathrm{k}} v-v\right) & =0
\end{aligned}
$$

## Local deflection reconstruction II

■ By the definition of $\underline{I}_{T}^{k}$ it holds, for all $v \in \mathrm{H}^{2}(\mathrm{~T})$ and all $w \in \mathbb{P}^{k+2}(\mathrm{~T})$,

$$
\begin{aligned}
\left(\mathbb{A}_{T} \nabla^{2} p_{\mathrm{T}}^{\mathrm{k}+2} \underline{-}_{-}^{\mathrm{k}} v, \nabla^{2} w\right)_{\mathrm{T}}= & \left(\mathbb{X}_{\mathrm{T}}^{\chi} v, \operatorname{div} \operatorname{div} \mathbb{A}_{\mathrm{T}} \nabla^{2} w\right)_{\mathrm{T}} \\
& +\sum_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}\left(\mathbb{X}_{\mathrm{F}}^{\chi}(\nabla v),\left(\mathbb{A}_{\mathrm{T}} \nabla^{2} w\right) \mathbf{n}_{\mathrm{TF}}\right)_{\mathrm{F}} \\
& -\sum_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}\left(\mathbb{X}_{\mathrm{F}}^{\chi} v, \operatorname{div} \mathbb{A}_{\mathrm{T}} \nabla^{2} w \cdot \mathbf{n}_{\mathrm{TF}}\right)_{\mathrm{F}} \\
= & \left(\mathbb{A}_{\mathrm{T}} \nabla^{2} v, \nabla^{2} w\right)_{\mathrm{T}}
\end{aligned}
$$

- As a result, for $v \in \mathrm{H}^{2}(\mathrm{~T})$,

$$
\begin{gathered}
\left(\mathbb{A}_{\mathrm{T}} \nabla^{2}\left(p_{\mathrm{T}}^{k+2} \underline{\mathrm{I}}_{\mathrm{T}}^{\mathrm{k}} v-v\right), \nabla^{2} w\right)_{\mathrm{T}}=0 \quad \forall w \in \mathbb{P}^{k+2}(\mathrm{~T}), \\
\pi_{\mathrm{T}}^{1}\left(\mathrm{p}_{\mathrm{T}}^{\mathrm{k}+2} \underline{\mathrm{I}}_{\mathrm{T}}^{\mathrm{k}} v-v\right)=0 \\
\Downarrow \\
p_{\mathrm{T}}^{k+2} \circ \underline{I}_{T}^{k}=\varpi_{\mathrm{T}}^{k+2}
\end{gathered}
$$

- Thus, $\mathrm{p}_{\mathrm{T}}^{\mathrm{k}+2} \circ \underline{\mathrm{I}}_{\mathrm{T}}^{\mathrm{k}}$ has optimal $\mathrm{H}^{\mathrm{s}}$-approximation properties

## Global problem I

■ For all $T \in \mathcal{T}_{h}$, we define the local bilinear form $\mathrm{a}_{\mathrm{T}}: \underline{\mathrm{U}}_{\mathrm{T}}^{\mathrm{k}} \times \underline{\mathrm{U}}_{\mathrm{T}}^{\mathrm{k}} \rightarrow \mathbb{R}$ by

$$
\mathrm{a}_{\mathrm{T}}\left(\underline{u}_{\mathrm{T}}, \underline{\mathrm{v}}_{\mathrm{T}}\right):=\left(\mathbb{A}_{\mathrm{T}} \nabla^{2} p_{\mathrm{T}}^{\mathrm{k}+2} \underline{u}_{\mathrm{T}}, \nabla^{2} \mathrm{p}_{\mathrm{T}}^{\mathrm{k}+2} \underline{\mathrm{v}}_{\mathrm{T}}\right)_{\mathrm{T}}+\mathrm{s}_{\mathrm{T}}\left(\underline{u}_{\mathrm{T}}, \underline{\mathrm{v}}_{\mathrm{T}}\right)
$$

## Global problem I

- For all $\mathrm{T} \in \mathcal{T}_{h}$, we define the local bilinear form $\mathrm{a}_{\mathrm{T}}: \underline{\mathrm{U}}_{\mathrm{T}}^{\mathrm{k}} \times \underline{\mathrm{U}}_{\mathrm{T}}^{\mathrm{k}} \rightarrow \mathbb{R}$ by

$$
\mathrm{a}_{\mathrm{T}}\left(\underline{\mathrm{u}}_{\mathrm{T}}, \underline{\mathrm{v}}_{\mathrm{T}}\right):=\left(\mathbb{A}_{\mathrm{T}} \nabla^{2} p_{\mathrm{T}}^{\mathrm{k}+2} \underline{u}_{T}, \nabla^{2} p_{\mathrm{T}}^{\mathrm{k}+2} \underline{\mathrm{v}}_{\mathrm{T}}\right)_{\mathrm{T}}+\mathrm{s}_{\mathrm{T}}\left(\underline{u}_{\mathrm{T}}, \underline{\mathrm{v}}_{\mathrm{T}}\right)
$$

■ The stabilization term $\mathrm{s}_{\mathrm{T}}: \underline{\mathrm{U}}_{\mathrm{T}}^{\mathrm{k}} \times \underline{\mathrm{U}}_{\mathrm{T}}^{\mathrm{k}} \rightarrow \mathbb{R}$ is s.t.

$$
\begin{aligned}
\mathrm{s}_{\mathrm{T}}\left(\underline{\mathrm{u}}_{\mathrm{T}}, \underline{\mathrm{v}}_{\mathrm{T}}\right):= & \frac{\mathcal{A}_{\mathrm{T}}^{+}}{h_{\mathrm{T}}^{4}}\left(\pi_{\mathrm{T}}^{\mathrm{k}}\left(\mathrm{p}_{\mathrm{T}}^{\mathrm{k}+2} \underline{u}_{\mathrm{T}}-u_{\mathrm{T}}\right), \pi_{\mathrm{T}}^{\mathrm{k}}\left(\mathrm{p}_{\mathrm{T}}^{\mathrm{k}+2} \underline{v}_{\mathrm{T}}-v_{\mathrm{T}}\right)\right)_{\mathrm{T}} \\
& +\frac{\mathcal{A}_{\mathrm{T}}^{+}}{h_{\mathrm{T}}} \sum_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}\left(\pi_{\mathrm{F}}^{\mathrm{k}}\left(\nabla p_{\mathrm{T}}^{\mathrm{k}+2} \underline{u}_{\mathrm{T}}-\mathbf{u}_{\nabla, \mathrm{F}}\right), \pi_{\mathrm{F}}^{\mathrm{k}}\left(\nabla \mathrm{p}_{\mathrm{T}}^{\mathrm{k}+2} \underline{v}_{\mathrm{T}}-v_{\nabla, \mathrm{F}}\right)\right)_{\mathrm{F}} \\
& +\frac{\mathcal{A}_{\mathrm{T}}^{+}}{\mathrm{h}_{\mathrm{T}}^{3}} \sum_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}\left(\pi_{\mathrm{F}}^{\mathrm{k}}\left(p_{\mathrm{T}}^{\mathrm{k}+2} \underline{u}_{\mathrm{T}}-u_{\mathrm{F}}\right), \pi_{\mathrm{F}}^{\mathrm{k}}\left(p_{\mathrm{T}}^{\mathrm{k}+2} \underline{v}_{\mathrm{T}}-v_{\mathrm{F}}\right)\right)_{\mathrm{F}}
\end{aligned}
$$

## Global problem I

- For all $\mathrm{T} \in \mathcal{T}_{h}$, we define the local bilinear form $\mathrm{a}_{\mathrm{T}}: \underline{\mathrm{U}}_{\mathrm{T}}^{\mathrm{k}} \times \underline{\mathrm{U}}_{\mathrm{T}}^{\mathrm{k}} \rightarrow \mathbb{R}$ by

$$
\mathrm{a}_{\mathrm{T}}\left(\underline{\mathrm{u}}_{\mathrm{T}}, \underline{\mathrm{v}}_{\mathrm{T}}\right):=\left(\mathbb{A}_{\mathrm{T}} \nabla^{2} \mathrm{p}_{\mathrm{T}}^{\mathrm{k}+2} \underline{u}_{\mathrm{T}}, \nabla^{2} \mathrm{p}_{\mathrm{T}}^{\mathrm{k}+2} \underline{\mathrm{v}}_{\mathrm{T}}\right)_{\mathrm{T}}+\mathrm{s}_{\mathrm{T}}\left(\underline{\mathrm{u}}_{\mathrm{T}}, \underline{\mathrm{v}}_{\mathrm{T}}\right)
$$

■ The stabilization term $\mathrm{s}_{\mathrm{T}}: \underline{\mathrm{U}}_{\mathrm{T}}^{\mathrm{k}} \times \underline{\mathrm{U}}_{\mathrm{T}}^{\mathrm{k}} \rightarrow \mathbb{R}$ is s.t.

$$
\begin{aligned}
\mathrm{s}_{\mathrm{T}}\left(\underline{\mathrm{u}}_{\mathrm{T}}, \underline{\mathrm{v}}_{\mathrm{T}}\right): & \frac{\mathcal{A}_{\mathrm{T}}^{+}}{\mathrm{h}_{\mathrm{T}}^{4}}\left(\pi_{\mathrm{T}}^{\mathrm{k}}\left(\mathrm{p}_{\mathrm{T}}^{\mathrm{k}+2} \underline{u}_{\mathrm{T}}-u_{\mathrm{T}}\right), \pi_{\mathrm{T}}^{\mathrm{k}}\left(\mathrm{p}_{\mathrm{T}}^{\mathrm{k}+2} \underline{v}_{\mathrm{T}}-v_{\mathrm{T}}\right)\right)_{\mathrm{T}} \\
& +\frac{\mathcal{A}_{\mathrm{T}}^{+}}{h_{\mathrm{T}}} \sum_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}\left(\pi _ { \mathrm { F } } ^ { \mathrm { k } } \left(\nabla \mathrm{p}_{\mathrm{T}}^{\left.\left.\mathrm{k+2} \underline{u}_{\mathrm{T}}-u_{\nabla, \mathrm{F}}\right), \pi_{\mathrm{F}}^{\mathrm{k}}\left(\nabla \mathrm{p}_{\mathrm{T}}^{\mathrm{k}+2} \underline{v}_{\mathrm{T}}-v_{\nabla, \mathrm{F}}\right)\right)_{\mathrm{F}}}\right.\right. \\
& +\frac{\mathcal{A}_{\mathrm{T}}^{+}}{\mathrm{h}_{\mathrm{T}}^{3}} \sum_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}\left(\pi_{\mathrm{F}}^{\mathrm{k}}\left(p_{\mathrm{T}}^{\mathrm{k}+2} \underline{u}_{\mathrm{T}}-u_{\mathrm{F}}\right), \pi_{\mathrm{F}}^{\mathrm{k}}\left(\mathrm{p}_{\mathrm{T}}^{\mathrm{k}+2} \underline{v}_{\mathrm{T}}-v_{\mathrm{F}}\right)\right)_{\mathrm{F}}
\end{aligned}
$$

$\square$ Polynomial consistency: since $p_{T}^{k+2} \underline{I}_{T}^{k} v=\varpi_{T}^{k+2} v=v$ for all $v \in \mathbb{P}^{k+2}(\mathrm{~T})$,

$$
\mathrm{s}_{\mathrm{T}}\left(\underline{\mathrm{l}}_{\mathrm{T}}^{\mathrm{k}} v, \underline{\mathrm{w}}_{\mathrm{T}}\right)=0 \quad \forall \underline{\mathrm{w}}_{\mathrm{T}} \in \underline{\mathrm{U}}_{\mathrm{T}}^{\mathrm{k}}
$$

## Global problem II

■ Define the following global space with single-valued interface unknowns:

$$
\underline{u}_{h}^{k}:=\left(\underset{T \in \mathcal{T}_{h}}{X} \mathbb{P}^{\mathrm{k}}(\mathrm{~T})\right) \times\left(\underset{\mathrm{F} \in \mathcal{F}_{h}}{X} \mathbb{P}^{\mathrm{k}}(\mathrm{~F})^{2}\right) \times\left(\underset{\mathrm{F} \in \mathcal{F}_{h}}{X} \mathbb{P}^{\mathrm{k}}(\mathrm{~F})\right)
$$

## Global problem II

- Define the following global space with single-valued interface unknowns:

$$
\underline{U}_{h}^{k}:=\left(\underset{T \in \mathcal{T}_{h}}{X} \mathbb{P}^{k}(\mathrm{~T})\right) \times\left(\underset{\mathrm{F} \in \mathcal{F}_{h}}{X} \mathbb{P}^{\mathrm{k}}(\mathrm{~F})^{2}\right) \times\left(\underset{\mathrm{F} \in \mathcal{F}_{h}}{X} \mathbb{P}^{\mathrm{k}}(\mathrm{~F})\right)
$$

- A global bilinear form is assembled element-wise:

$$
a_{h}\left(\underline{u}_{h}, \underline{v}_{h}\right):=\sum_{\mathrm{T} \in \mathcal{T}_{h}} a_{\mathrm{T}}\left(\underline{u}_{\mathrm{T}}, \underline{\mathrm{v}}_{\mathrm{T}}\right)
$$

## Global problem II

- Define the following global space with single-valued interface unknowns:

$$
{\underline{U_{n}^{k}}}_{k}^{k}=\left(\underset{T \in \mathcal{T}_{h}}{X} \mathbb{P}^{k}(T)\right) \times\left(\underset{F \in \mathcal{F}_{h}}{X} \mathbb{P}^{k}(F)^{2}\right) \times\left(\underset{F \in \mathcal{F}_{h}}{\times} \mathbb{P}^{k}(F)\right)
$$

- A global bilinear form is assembled element-wise:

$$
\mathrm{a}_{\mathrm{h}}\left(\underline{\mathrm{u}}_{\mathrm{h}}, \underline{\mathrm{v}}_{\mathrm{h}}\right):=\sum_{\mathrm{T} \in \mathcal{T}_{h}} \mathrm{a}_{\mathrm{T}}\left(\underline{\mathrm{u}}_{\mathrm{T}}, \underline{\mathrm{v}}_{\mathrm{T}}\right)
$$

## Discrete problem

Find $\underline{u}_{h} \in \underline{U}_{h, 0}^{k}:=\left\{\underline{v}_{h} \in \underline{U}_{h}^{k}: v_{F}=0, v_{\nabla, F}=0\right.$ for any $\left.F \in \mathcal{F}_{h}^{b}\right\}$ s.t.

$$
\begin{gathered}
a_{h}\left(\underline{u}_{h}, \underline{v}_{h}\right)=\left(f, v_{h}\right) \\
\text { with } v_{h \mid T}=v_{T} \text { for all } T \in \mathcal{T}_{h}
\end{gathered}
$$

## Global problem III

- Define on $\underline{\mathrm{U}}_{h, 0}^{\mathrm{k}}$ the following norm

$$
\begin{aligned}
\left\|\underline{v}_{h}\right\|_{\mathbb{A}, h}:=\sum_{T \in \mathcal{T}_{h}}( & \left(\left\|\mathbb{A}_{T}^{1 / 2} \nabla^{2} v_{T}\right\|_{T}^{2}+\frac{\mathcal{A}_{T}^{+}}{h_{T}} \sum_{F \in \mathcal{F}_{T}}\left\|v_{\nabla, F}-\nabla v_{T}\right\|_{F}^{2}\right. \\
& \left.+\frac{\mathcal{A}_{T}^{+}}{h_{T}^{3}} \sum_{\mathrm{F} \in \mathcal{F}_{T}}\left\|\boldsymbol{v}_{F}-v_{T}\right\|_{F}^{2}\right)^{1 / 2}
\end{aligned}
$$

## Global problem III

- Define on $\underline{\mathrm{U}}_{h, 0}^{\mathrm{k}}$ the following norm

$$
\begin{aligned}
\left\|\underline{v}_{h}\right\|_{\mathbb{A}, h}:=\sum_{T \in \mathcal{T}_{h}}( & \left(\left\|\mathbb{A}_{T}^{1 / 2} \nabla^{2} v_{T}\right\|_{T}^{2}+\frac{\mathcal{A}_{T}^{+}}{h_{T}} \sum_{F \in \mathcal{F}_{T}}\left\|v_{\nabla, F}-\nabla v_{T}\right\|_{F}^{2}\right. \\
& \left.+\frac{\mathcal{A}_{T}^{+}}{h_{T}^{3}} \sum_{\mathrm{F} \in \mathcal{F}_{T}}\left\|\boldsymbol{v}_{F}-v_{T}\right\|_{F}^{2}\right)^{1 / 2}
\end{aligned}
$$

- The global bilinear form $a_{h}$ is coercive and bounded:

$$
\left\|\underline{\mathrm{v}}_{\boldsymbol{h}}\right\|_{\mathbb{A}, \mathrm{h}}^{2} \lesssim \mathrm{a}_{\mathrm{h}}\left(\underline{\mathrm{v}}_{\mathrm{h}}, \underline{\mathrm{v}}_{\mathrm{h}}\right) \lesssim\left\|\underline{\mathrm{v}}_{\underline{h}}\right\|_{\mathbb{A}, \mathrm{h}}^{2} \quad \forall \underline{\mathrm{v}}_{\mathrm{h}} \in \underline{\mathrm{U}}_{\mathrm{h}, 0}^{\mathrm{k}}
$$

## Global problem III

- Define on $\underline{\mathrm{U}}_{\mathrm{h}, 0}^{\mathrm{k}}$ the following norm

$$
\begin{aligned}
\left\|\underline{\mathrm{v}}_{\mathrm{h}}\right\|_{\mathbb{A}, h}:=\sum_{\mathrm{T} \in \mathcal{T}_{h}}( & \left\|\mathbb{A}_{\mathrm{T}}^{1 / 2} \nabla^{2} v_{\mathrm{T}}\right\|_{\mathrm{T}}^{2}+\frac{\mathcal{A}_{\mathrm{T}}^{+}}{\mathrm{h}_{\mathrm{T}}} \sum_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}\left\|v_{\nabla, \mathrm{F}}-\nabla v_{\mathrm{T}}\right\|_{\mathrm{F}}^{2} \\
& \left.+\frac{\mathcal{A}_{\mathrm{T}}^{+}}{\mathrm{h}_{\mathrm{T}}^{3}} \sum_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}\left\|v_{\mathrm{F}}-v_{\mathrm{T}}\right\|_{\mathrm{F}}^{2}\right)^{1 / 2}
\end{aligned}
$$

- The global bilinear form $a_{h}$ is coercive and bounded:

$$
\left\|\underline{\mathrm{v}}_{\mathrm{h}}\right\|_{\mathbb{A}, \mathrm{h}}^{2} \lesssim \mathrm{a}_{\mathrm{h}}\left(\underline{\mathrm{v}}_{\mathrm{h}}, \underline{\mathrm{v}}_{\mathrm{h}}\right) \lesssim\left\|\underline{\mathrm{v}}_{\mathrm{h}}\right\|_{\mathbb{A}, \mathrm{h}}^{2} \quad \forall \underline{\mathrm{v}}_{\mathrm{h}} \in \underline{\mathrm{U}}_{\mathrm{h}, 0}^{\mathrm{k}}
$$

- The global bilinear form $\mathrm{a}_{\mathrm{h}}$ is consistent: for all $v \in \mathrm{H}^{\mathrm{k}+3}(\Omega) \cap \mathrm{H}_{0}^{2}(\Omega)$,

$$
\sup _{\underline{w}_{h} \in \underline{U}_{h, 0}^{k} \backslash\left\{\underline{0}_{h}\right\}} \frac{\left(\operatorname{div} \operatorname{div} \mathbb{A} \nabla^{2} v, w_{h}\right)-a_{h}\left(\underline{l}_{h}^{k} v, \underline{w}_{h}\right)}{\left\|\underline{w}_{h}\right\|_{\mathbb{A}, h}} \lesssim h^{k+1}|v|_{H^{k+3}(\Omega)}
$$

## Energy-error estimate

- Define the global deflection reconstruction $p_{h}^{k+2}: \underline{U}_{h}^{k} \rightarrow L^{2}(\Omega)$ s.t., for all $\underline{v}_{h} \in \underline{U}_{h}^{k}$,

$$
\left(p_{h}^{k+2} \underline{\mathbf{v}}_{h}\right)_{\mid T}=p_{T}^{k+2} \underline{\mathbf{v}}_{T} \quad \forall T \in \mathcal{T}_{h}
$$

- Define the following stabilization seminorm on $\underline{\mathrm{U}}_{\mathrm{h}}^{\mathrm{k}}$

$$
\left|\underline{\mathrm{v}}_{\mathrm{h}}\right|_{\mathrm{s}, \mathrm{~h}}^{2}:=\sum_{\mathrm{T} \in \mathcal{T}_{\mathrm{h}}} \mathrm{~s}_{\mathrm{T}}\left(\underline{\mathrm{v}}_{\mathrm{T}}, \underline{\mathrm{v}}_{\mathrm{T}}\right)
$$

## Theorem (Energy-error estimate)

Let $u \in H_{0}^{2}(\Omega)$ and $\underline{u}_{h} \in \underline{U}_{h, 0}^{k}$. Assume the additional regularity $u \in H^{k+3}(\Omega)$. Then, there is $C>0$ depending on $\mathbb{A}$, but independent of $h$, s.t.

$$
\left\|\mathbb{A}^{1 / 2} \nabla_{h}^{2}\left(p_{h}^{k+2} \underline{u}_{h}-u\right)\right\|+\left|\underline{u}_{h}\right|_{s, h} \leqslant \mathrm{Ch}^{k+1}|u|_{H^{k+3}(\Omega)}
$$

## Energy-error estimate

- Define the global deflection reconstruction $p_{h}^{k+2}: \underline{U}_{h}^{k} \rightarrow L^{2}(\Omega)$ s.t., for all $\underline{v}_{h} \in \underline{U}_{h}^{k}$,

$$
\left(p_{h}^{k+2} \underline{\mathrm{v}}_{\mathrm{h}}\right)_{\mid \mathrm{T}}=\mathrm{p}_{\mathrm{T}}^{\mathrm{k}+2} \underline{\mathrm{v}}_{\mathrm{T}} \quad \forall \mathrm{~T} \in \mathcal{T}_{\mathrm{h}}
$$

- Define the following stabilization seminorm on $\underline{\mathrm{U}}_{\mathrm{h}}^{\mathrm{k}}$

$$
\left|\underline{v}_{\mathrm{h}}\right|_{\mathrm{s}, \mathrm{~h}}^{2}:=\sum_{\mathrm{T} \in \mathcal{T}_{\mathrm{h}}} \mathrm{~s}_{\mathrm{T}}\left(\underline{\mathrm{v}}_{\mathrm{T}}, \underline{\mathrm{v}}_{\mathrm{T}}\right)
$$

## Theorem (Energy-error estimate)

Let $u \in H_{0}^{2}(\Omega)$ and $\underline{u}_{h} \in \underline{U}_{h, 0}^{k}$. Assume the additional regularity $u \in H^{k+3}(\Omega)$. Then, there is $C>0$ depending on $\mathbb{A}$, but independent of $h$, s.t.

$$
\left\|\mathbb{A}^{1 / 2} \nabla_{h}^{2}\left(p_{h}^{k+2} \underline{u}_{h}-u\right)\right\|+\left|\underline{u}_{h}\right|_{s, h} \leqslant \mathrm{Ch}^{k+1}|\mathbf{u}|_{H^{k+3}(\Omega)} .
$$

- Choosing $\mathrm{k}=1$ we recover the HCT error estimate

## $L^{2}$-error estimate

- To infer a sharp $L^{2}$-error estimate, we assume biharmonic regularity:

For all $\mathrm{q} \in \mathrm{L}^{2}(\Omega)$, the solution $z \in \mathrm{H}_{0}^{2}(\Omega)$ to

$$
\left(\mathbb{A} \nabla^{2} z, \nabla^{2} v\right)=(\mathrm{q}, v) \quad \forall v \in \mathrm{H}_{0}^{2}(\Omega)
$$

satisfies the a priori estimate

$$
\|z\|_{H^{4}(\Omega)} \leqslant C_{\text {bihar }}\|q\|,
$$

with $\mathrm{C}_{\text {bihar }}>0$ only depending on $\Omega$

## $L^{2}$-error estimate

- To infer a $\operatorname{sharp} \mathrm{L}^{2}$-error estimate, we assume biharmonic regularity:

For all $\mathrm{q} \in \mathrm{L}^{2}(\Omega)$, the solution $z \in \mathrm{H}_{0}^{2}(\Omega)$ to

$$
\left(\mathbb{A} \nabla^{2} z, \nabla^{2} v\right)=(q, v) \quad \forall v \in H_{0}^{2}(\Omega)
$$

satisfies the a priori estimate

$$
\|z\|_{H^{4}(\Omega)} \leqslant C_{\text {bihar }}\|q\|,
$$

with $\mathrm{C}_{\text {bihar }}>0$ only depending on $\Omega$

## Theorem ( $\mathrm{L}^{2}$-error estimate)

Let $u \in H_{0}^{2}(\Omega)$ and $\underline{u}_{h} \in \underline{U}_{h, 0}^{k}$. Assume biharmonic regularity, $f \in H^{k+1}\left(\mathcal{T}_{h}\right)$, and $u \in H^{k+3}(\Omega)$. Then, there is $C>0$ depending on $\mathbb{A}$, but independent of h, s.t.

$$
\left\|\mathfrak{p}_{h}^{k+2} \underline{u}_{h}-\mathfrak{u}\right\| \leqslant \mathrm{Ch}^{k+3}\left(\|\mathfrak{u}\|_{H^{k+3}(\Omega)}+\|f\|_{H^{k+1}\left(\mathcal{T}_{h}\right)}\right) .
$$

## Numerical examples I

- We solve the biharmonic equation on $\Omega=(0,1) \times(0,1)$, for

$$
u(x, y)=x^{2}(1-x)^{2} y^{2}(1-y)^{2}
$$

$$
\rightarrow k=1 \quad \rightarrow k=2 \quad \longrightarrow k=3
$$

(a) Triangular

(b) Cartesian

(c) Hexagonal

Figure: Energy error vs. meshsize for three different meshes

## Numerical examples II

- We solve the biharmonic equation on $\Omega=(0,1) \times(0,1)$, for

$$
u(x, y)=x^{2}(1-x)^{2} y^{2}(1-y)^{2}
$$

$$
\longrightarrow-k=1 \quad \longrightarrow k=2 \quad \longrightarrow k=3
$$

## Discrete PVW \& Laws of action-reaction I

$\square$ Let $T \in \mathcal{T}_{h}$ be fixed, and $M_{T}:=-\mathbb{A}_{T} \nabla^{2} u$

## Discrete PVW \& Laws of action-reaction I

$\square$ Let $T \in \mathcal{T}_{h}$ be fixed, and $M_{T}:=-\mathbb{A}_{T} \nabla^{2} u$

- At the continuous level
- The principle of virtual work holds:

$$
\begin{array}{r}
\text { For all } v \in \mathbb{P}^{\mathrm{k}}(\mathrm{~T}), \\
-\left(\boldsymbol{M}_{\mathrm{T}}, \nabla^{2} v\right)_{\mathrm{T}}+\sum_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}\left(\mathbf{M}_{\mathrm{T}} \mathbf{n}_{\mathrm{TF}}, \nabla v\right)_{\mathrm{F}}-\sum_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}\left(\operatorname{div} \boldsymbol{M}_{\mathrm{T}} \cdot \mathbf{n}_{\mathrm{TF}}, v\right)_{\mathrm{F}}=(\mathrm{f}, v)_{\mathrm{T}}
\end{array}
$$

- The following laws of action-reaction hold, for $F \in \mathcal{F}_{\mathrm{T}_{1}} \cap \mathcal{F}_{\mathrm{T}_{2}}$ :

$$
\mathbf{M}_{\mathrm{T}_{1}} \mathbf{n}_{\mathrm{T}_{1} \mathrm{~F}}+\mathbf{M}_{\mathrm{T}_{2}} \mathbf{n}_{\mathrm{T}_{2} \mathrm{~F}}=0, \quad \operatorname{div} \mathbf{M}_{\mathrm{T}_{1}} \cdot \mathbf{n}_{\mathrm{T}_{1} \mathrm{~F}}+\operatorname{div} \mathbf{M}_{\mathrm{T}_{2}} \cdot \mathbf{n}_{\mathrm{T}_{2} \mathrm{~F}}=0
$$

## Discrete PVW \& Laws of action-reaction I

$\square$ Let $T \in \mathcal{T}_{h}$ be fixed, and $M_{T}:=-\mathbb{A}_{T} \nabla^{2} u$

- At the continuous level
- The principle of virtual work holds:

$$
\begin{gathered}
\text { For all } v \in \mathbb{P}^{\mathrm{k}}(\mathrm{~T}), \\
-\left(\boldsymbol{M}_{\mathrm{T}}, \nabla^{2} v\right)_{\mathrm{T}}+\sum_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}\left(\mathbf{M}_{\mathrm{T}} \mathbf{n}_{\mathrm{TF}}, \nabla v\right)_{\mathrm{F}}-\sum_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}\left(\operatorname{div} \boldsymbol{M}_{\mathrm{T}} \cdot \mathbf{n}_{\mathrm{TF}}, v\right)_{\mathrm{F}}=(\mathrm{f}, v)_{\mathrm{T}}
\end{gathered}
$$

- The following laws of action-reaction hold, for $F \in \mathcal{F}_{T_{1}} \cap \mathcal{F}_{T_{2}}$ :

$$
\mathbf{M}_{\mathrm{T}_{1}} \mathbf{n}_{\mathrm{T}_{1} \mathrm{~F}}+\mathbf{M}_{\mathrm{T}_{2}} \mathbf{n}_{\mathrm{T}_{2} \mathrm{~F}}=0, \quad \operatorname{div} \mathbf{M}_{\mathrm{T}_{1}} \cdot \mathbf{n}_{\mathrm{T}_{1} \mathrm{~F}}+\operatorname{div} \mathbf{M}_{\mathrm{T}_{2}} \cdot \mathbf{n}_{\mathrm{T}_{2} \mathrm{~F}}=0
$$

- The solution to the discrete problem satisfies discrete counterparts of the above statements

## Discrete PVW \& Laws of action-reaction II

- Define the space

$$
\underline{\mathrm{D}}_{\partial \mathrm{T}}^{\mathrm{k}}:=\left(\underset{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}{X} \mathbb{P}^{\mathrm{k}}(\mathrm{~F})^{2}\right) \times\left(\underset{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}{X} \mathbb{P}^{\mathrm{k}}(\mathrm{~F})\right)
$$

and the boundary difference operator $\underline{\delta}_{\partial T}^{k}: \underline{U}_{T}^{k} \rightarrow \underline{D}_{\partial T}^{k}$ s.t., for all $\underline{v}_{T} \in \underline{U}_{T}^{k}$,

$$
\begin{aligned}
\underline{\delta}_{\partial \mathrm{T} \underline{\mathrm{~V}}_{\mathrm{T}}}^{\mathrm{k}} & \equiv\left(\left(\boldsymbol{\delta}_{\left.\left.\nabla, \mathrm{F} \underline{\mathrm{~V}} T^{\mathrm{k}}\right)_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}},\left(\delta_{\mathrm{F}}^{\mathrm{V}} \underline{\mathrm{~V}} \mathrm{~T}\right)_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}\right)}\right.\right. \\
& :=\left(\left(\boldsymbol{v}_{\nabla, \mathrm{F}}-\boldsymbol{\nabla} v_{\mathrm{T}}\right)_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}},\left(v_{\mathrm{F}}-v_{\mathrm{T}}\right)_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}\right)
\end{aligned}
$$

## Discrete PVW \& Laws of action-reaction II

- Define the space

$$
\underline{\mathrm{D}}_{\partial \mathrm{T}}^{\mathrm{k}}:=\left(\underset{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}{X} \mathbb{P}^{\mathrm{k}}(\mathrm{~F})^{2}\right) \times\left(\underset{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}{X} \mathbb{P}^{\mathrm{k}}(\mathrm{~F})\right)
$$

and the boundary difference operator $\underline{\delta}_{\partial T}^{k}: \underline{U}_{T}^{k} \rightarrow \underline{D}_{\partial T}^{k}$ s.t., for all $\underline{v}_{T} \in \underline{U}_{T}^{k}$,

$$
\begin{aligned}
\underline{\delta}_{\partial T}^{k} \underline{v}_{T} & \equiv\left(\left(\boldsymbol{\delta}_{\nabla, \mathrm{F} T}^{k}\right)_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}},\left(\boldsymbol{\delta}_{\mathrm{F} \underline{\mathrm{~V}}_{T}}^{\mathrm{k}}\right)_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}\right) \\
& :=\left(\left(\boldsymbol{v}_{\nabla, \mathrm{F}}-\boldsymbol{\nabla} v_{\mathrm{T}}\right)_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}},\left(v_{\mathrm{F}}-v_{\mathrm{T}}\right)_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}\right)
\end{aligned}
$$

- Define now the residual operator

$$
\underline{R}_{\partial T}^{k} \equiv\left(\left(\mathbf{R}_{\nabla, \mathrm{F}}^{\mathrm{k}}\right)_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}},\left(\mathrm{R}_{\mathrm{F}}^{\mathrm{k}}\right)_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}\right): \underline{\mathrm{U}}_{\mathrm{T}}^{\mathrm{k}} \rightarrow \underline{\mathrm{D}}_{\partial \mathrm{T}}^{\mathrm{k}}
$$

s.t., for all $\underline{v}_{T} \in \underline{U}_{T}^{k}$ and all $\underline{\alpha}_{\partial T} \equiv\left(\left(\boldsymbol{\alpha}_{\nabla, F}\right)_{F \in \mathcal{F}_{T}},\left(\alpha_{F}\right)_{F \in \mathcal{F}_{T}}\right) \in \underline{D}_{\partial T}^{k}$,

$$
\begin{aligned}
\left(\underline{R}_{\partial T}^{k} \underline{\mathrm{~V}}_{T}, \underline{\alpha}_{\partial T}\right)_{0, \partial T} & \equiv \sum_{F \in \mathcal{F}_{T}}\left(\left(\mathbf{R}_{\nabla, F}^{k} \underline{\mathrm{~V}}_{T}, \alpha_{\nabla, F}\right)_{F}+\left(\mathrm{R}_{\mathrm{F}}^{\mathrm{k}} \underline{\mathrm{~V}}_{T}, \alpha_{F}\right)_{F}\right) \\
& =\mathrm{s}_{T}\left(\left(0, \underline{\delta}_{\partial T}^{k} \underline{\mathrm{~V}} T^{k}\right),\left(0, \underline{\alpha}_{\partial T}\right)\right)
\end{aligned}
$$

## Discrete PVW \& Laws of action-reaction III

## Lemma (Local principle of virtual work and laws of action-reaction)

Let $\underline{u}_{h} \in \underline{U}_{h, 0}^{k}$ be the unique solution to the discrete problem and, for all $T \in \mathcal{T}_{h}$ and all $F \in \mathcal{F}_{\mathrm{T}}$, define the discrete moment and shear force

$$
\begin{aligned}
& \mathcal{M}_{\mathrm{TF}}^{\mathrm{k}}\left(\underline{\mathrm{u}}_{\mathrm{T}}\right):=-\left(\left(\mathbb{A} \boldsymbol{\nabla}^{2} p_{\mathrm{T}}^{\mathrm{k}+2} \underline{u}_{\mathrm{T}}\right) \mathbf{n}_{\mathrm{TF}}+\mathbf{R}_{\boldsymbol{\nabla}, \mathrm{F}}^{\mathrm{k}} \underline{\mathrm{u}}_{\mathrm{T}}\right) \text {, } \\
& \mathcal{S}_{\mathrm{TF}}^{\mathrm{k}}\left(\underline{\mathrm{u}}_{\mathrm{T}}\right):=-\operatorname{div} \mathbb{A} \boldsymbol{\nabla}^{2} \mathrm{p}_{\mathrm{T}}^{\mathrm{k}+2} \underline{\mathrm{u}}_{\mathrm{T}} \cdot \mathbf{n}_{\mathrm{TF}}+\mathrm{R}_{\mathrm{F}}^{\mathrm{k}} \underline{\underline{u}}_{\mathrm{T}} .
\end{aligned}
$$

Then, the following discrete counterparts of PVW and laws of action-reaction hold, respectively:

For any mesh element $T \in \mathcal{T}_{h}$, and for all $\nu_{T} \in \mathbb{P}^{k}(T)$,

$$
\left(\mathbb{A}_{T} \nabla^{2} p_{T}^{k+2} \underline{u}_{T}, v_{T}\right)_{T}+\sum_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}\left(\mathcal{M}_{\mathrm{TF}}^{\mathrm{k}}\left(\underline{\mathrm{u}}_{\mathrm{T}}\right), \nabla v_{\mathrm{T}}\right)_{\mathrm{F}}-\sum_{\mathrm{F} \in \mathcal{F}_{\mathrm{T}}}\left(\mathcal{S}_{\mathrm{TF}}^{\mathrm{k}}\left(\underline{\mathrm{u}}_{\mathrm{T}}\right), v_{\mathrm{T}}\right)_{\mathrm{F}}=\left(\mathrm{f}, v_{\mathrm{T}}\right)_{\mathrm{T}} ;
$$

For any interface $F \in \mathcal{F}_{\mathrm{T}_{1}} \cap \mathcal{F}_{\mathrm{T}_{2}}$,

$$
\mathcal{M}_{\mathrm{T}_{1} \mathrm{~F}}^{\mathrm{k}}\left(\underline{\mathrm{u}}_{\mathrm{T}_{1}}\right)+\mathcal{M}_{\mathrm{T}_{2} \mathrm{~F}}^{\mathrm{k}}\left(\underline{\mathrm{u}}_{\mathrm{T}_{2}}\right)=0, \quad \mathcal{S}_{\mathrm{T}_{1} \mathrm{~F}}^{\mathrm{k}}\left(\underline{\mathrm{u}}_{\mathrm{T}_{1}}\right)+\mathcal{S}_{\mathrm{T}_{2} \mathrm{~F}}^{\mathrm{k}}\left(\underline{\mathrm{u}}_{\mathrm{T}_{2}}\right)=0 .
$$

2) Key ideas for HHO
(3) Discrete setting

- Discrete PVW \& Laws of action-reaction
(5) Conclusions \& perspectives

## Conclusions \& perspectives

## Conclusions

- We presented a new nonconforming method based on a primal formulation
- Choosing $k=1$ is enough to get a quadratic energy error and a quartic $L^{2}$-error
- Mechanical equilibrium principles are reproduced at the discrete level

## Conclusions \& perspectives

## Conclusions

- We presented a new nonconforming method based on a primal formulation
- Choosing $k=1$ is enough to get a quadratic energy error and a quartic $L^{2}$-error
- Mechanical equilibrium principles are reproduced at the discrete level

## Perspectives

Consider the case of simply supported plates:

$$
\mathbf{u}=0 \quad \text { and } \quad\left(\mathbb{A} \boldsymbol{\nabla}^{2} \mathbf{u}\right) \mathbf{n} \cdot \mathbf{n}=0 \quad \text { on } \partial \Omega
$$

- Consider a variant based on a dual formulation
- Couple the method with a time discretization to treat dynamics of plates
